

University of Florida GeoPlan Center Technical Training Workshop

**Invitation to
Register!**

SEA LEVEL SCENARIO SKETCH PLANNING TOOL

The University of Florida GeoPlan Center is offering a technical training workshop on the Sea Level Scenario (SLS) Sketch Planning Tool, a set of publicly accessible GIS tools (sls.geoplan.ufl.edu) intended to help identify transportation infrastructure exposed to current and future flooding.

**This workshop is free!
But space is limited.**

Participants will need to bring a laptop or tablet or plan to share.

Participants will learn:

- How to use the recently updated Sea Level Scenario Sketch Planning Tool map viewer;
- Introduction to sea level change concepts and SLR projections from U.S. Army Corps of Engineers (USACE) and National Oceanic and Atmospheric Administration (NOAA);
- How to view current flood risk areas, projected future flood areas from SLR, and affected infrastructure using the map viewer;
- How to download GIS layers of SLR and affected transportation
- Optional (for those w/ ArcGIS): How to run the SLR Inundation Surface Calculator for ArcMap.

**Jacksonville Session:
Friday, November 3, 2017
10:00am – 3:00pm**

North Florida TPO 980 N Jefferson St, Jacksonville, FL 32209

[Click here to register](#)

Who Should Attend? MPO/TPO/TPA staff, Regional Planning Council staff, and county or municipal staff and community partners involved in transportation planning, coastal resiliency efforts, and GIS and mapping.

For other workshop locations, see: <https://sls.geoplan.ufl.edu/training>
For more information, contact Crystal Goodison: goody@geoplan.ufl.edu

About the Sea Level Scenario Sketch Planning Tool

The purpose of the Sea Level Scenario (SLS) Sketch Planning Tool is to help identify transportation infrastructure vulnerable to current and future flood risks. The tool analyzes and visualizes current flood risks (100-year and 500-year floodplains and hurricane storm surge zones) as well as future flood risks using sea level rise (SLR) scenarios from the U.S. Army Corps of Engineers (USACE) and the National Oceanic and Atmospheric Administration (NOAA)/ National Climate Assessment.

The SLS Sketch Planning Tool was created by the University of Florida GeoPlan Center with funding from the Florida Department of Transportation. SLR scenarios were recently updated and a new map viewer was developed for visualizing flood risks and affected transportation facilities. The SLS Sketch Planning tool can assist in understanding how and when future sea level rise may impact the transportation system.

The SLS Sketch Planning Tool includes:

(1) Online map viewer for visualizing current and future flood risk under SLR scenarios and potentially affected transportation infrastructure. (2) GIS data layers of SLR inundation and affected transportation; and (3) ArcMap add-in tool for creating GIS layers of SLR inundation.

AICP members can earn Certification Maintenance (CM) credits for this activity. More information about AICP's CM program can be found at www.planning.org/cm

Workshop Agenda

10:00am - 11:00am	Introductions/ Objectives Background on Sea Level Rise and SLR Projections Overview of Sketch Planning Tool: Methods and Uses Policy Issues
11:00am - 11:45am	Demonstration of Sketch Planning Tool Components
11:45am - 1:00pm	Lunch Break
1:00pm - 1:45pm	Hands-on training exercises: Using the online map viewer
1:45pm - 2:30pm	Group exercise: conduct a vulnerability assessment
2:30pm - 3:00pm	Report out (group exercise findings) and closing

The GeoPlan Center was established in 1984 as a response to local and statewide needs for a teaching and research environment in Geographic Information Systems (GIS). The UF GeoPlan Center works to support land use, transportation, and environmental planning in the State of Florida by providing geospatial and planning expertise, data, training, and education to the stakeholders involved in the planning process. <http://www.geoplan.ufl.edu>
